

NANCY KUMARI TERAPALLI

React.js Developer | Frontend Engineer | 4 Years of Experience

+91 8555993452 | nancybeulah.t@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

React.js Developer with 4 years of experience at Tata Consultancy Services building enterprise-grade web applications across government, insurance, and telecom domains. Skilled in React.js, Redux, REST APIs, JavaScript, reusable component architecture, frontend performance optimization, and secure authentication systems. Architected a reusable component library adopted across 4+ applications, reducing dashboard development time by 30%, and delivered real-time features including a live chat interface and intelligent search with auto-suggestions that increased user engagement by 25%. Contributed to scalable applications serving over 100K users with strong performance and reliability.

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+), HTML5, CSS3, TypeScript (in progress)

Frameworks & Libraries: React.js, React Hooks, React Router, Tailwind CSS, Material-UI, Bootstrap

State & Data Fetching: Redux, Context API, Axios, REST APIs, Service Layer Architecture

Auth & Security: JWT, Role-Based Access Control (RBAC), Protected Routes

Performance: Lazy Loading, Code Splitting, Debouncing, Pagination, Infinite Scroll, useMemo, useCallback, useRef

Data Visualization: Recharts, Highcharts

Testing & Build: Jest, React Testing Library, Webpack, Vite

Cloud & Tooling: Microsoft Azure, Git, GitHub, VS Code

Practices: Agile/Scrum, Code Reviews, Unit Testing, Responsive Design, Accessibility (WCAG 2.1), Cross-Browser Compatibility

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) | Frontend Developer — React.js | System Engineer Nov 2021 – Oct 2025
Hyderabad, India

- Architected and shipped React.js modules for a national government portal that scaled from 20K to 100K active users; applied code splitting and lazy loading to reduce initial bundle size and improve Time-to-Interactive by eliminating render-blocking resources.
- Designed and maintained a reusable component library — including form controls, data tables, and modals — adopted across 4 enterprise applications, cutting per-dashboard build time by 30% and enforcing a unified design language across teams.
- Built a real-time chat interface and a smart search module with debounced auto-suggestions for a 50K-user insurance portal, directly contributing to a 25% uplift in measured user engagement metrics.
- Developed interactive BI dashboards in Recharts and Highcharts with drill-down filters and live data feeds for a telecom analytics team, replacing static reports and reducing time-to-insight for business stakeholders.
- Implemented JWT-based authentication with RBAC and protected route guards, securing access across 3+ multi-role enterprise applications and eliminating unauthorized route access.
- Centralized all REST API communication through Axios interceptors — handling token refresh, error normalization, and request cancellation — reducing duplicate API-handling code by an estimated 40% across the codebase.
- Drove frontend performance improvements using useMemo, useCallback, and useRef to eliminate unnecessary re-renders; combined with pagination and infinite scroll to keep large list components under a 100ms interaction response time.
- Participated in 2-week Agile sprints; led unit testing with Jest and React Testing Library, maintaining >80% code coverage on owned modules; contributed to estimation sessions and design discussions.

KEY PROJECTS

Government Service Portal – SIMS | *React.js, Highcharts, REST APIs, Material-UI, Bootstrap*

- Delivered high-traffic citizen-facing modules for a national government portal serving up to 100K users; achieved WCAG 2.1 AA compliance and improved page load speed through code splitting and lazy loading.
- Designed reusable form components with built-in validation that reduced feature delivery turnaround by 30% across 3 sprint cycles.

Health Insurance Admin System - HRMS | *React.js, Redux, Axios, Bootstrap*

- Built a multi-role admin dashboard and a real-time chat UI supporting live policy workflow management; integrated 12+ REST API endpoints for real-time data synchronization.
- Delivered Recharts-based operational reporting views that replaced manual spreadsheet exports, improving weekly reporting efficiency for insurance agents.

Telecom Customer Analytics Dashboard | *React.js, Recharts, Highcharts, REST APIs*

- Developed customer-facing React modules and implemented interactive data visualizations using Highcharts with drill-down navigation and dynamic REST API integration.
- Optimized Axios request handling and introduced frontend caching strategies, reducing average dashboard load time and improving perceived performance under high data volumes.

Food & Beverage Platform | *React.js, Tailwind CSS, JavaScript (ES6+), CSS3*

- Delivered multiple UI enhancements and built a library of configurable, reusable frontend components that enabled rapid feature iteration without regression in existing flows.

KEY ACHIEVEMENTS

- 30% faster dashboard development: Built and scaled a reusable component library adopted across 4 TCS enterprise applications.
- 25% engagement increase: Smart search and live chat features on a 50K+ user insurance portal produced a measurable uplift in tracked user interaction.
- 100K+ users served: React.js applications deployed at national scale across government and telecom platforms with zero reported performance incidents.
- Full-cycle ownership: Led end-to-end feature delivery — from requirements gathering and design through deployment and post-release monitoring — on 3 consecutive enterprise projects.

CERTIFICATIONS

- Google Cloud Associate Cloud Engineer — Google Cloud
- React.js Developer Certification — Tata Consultancy Services

EDUCATION

Bachelor of Technology

2017 – 2021

Vignan's Institute of Engineering for Women, Visakhapatnam, Andhra Pradesh | CGPA: 7.35/10
